11. (NEW) A system that allows a user to control a movement of an endoscope,
the endoscope being located within an endoscope coordinate system that has a left-right axis and
an up-down axis which are orthogonal to each other and to a longitudinal axis of the endoscope,
comprising:
a first actuator located within a world coordinate system;
a second actuator that is coupled to said first actuator and located in the world coordinate
system, said first and second actuators being capable of moving the endoscope;
